

YOU ARE INVITED!

ICE Europe 2022

March 15– 17, 2022

Unparalleled range of deposition technologies and 60 years of experience make Applied Materials WEB Coating to a world leader in roll to roll vacuum coating equipment for flexible packaging, electronics and a variety of technical applications. At ICE Europe 2022 we present innovative production solutions based on advanced deposition technologies:

The [TOPBEAM](#)™ platform using electron beam evaporation, offers a solution for applying transparent coatings with improved clear barrier performance for a variety of oxide materials, such as AlOx and SiOx with up to 2850 mm coating width.

The [TOPCOIL](#)™ platform complements Applied Materials' evaporation portfolio with induction heated crucible technology. This is a solution for applications demanding aggressive, low defect performance and also enables depositing a wide range of materials to be deposited.

Come visit us at ICE Europe 2022 to learn more about our latest production and service solutions, our entire line of [TOPMET](#)™ and [TOPMET](#)™ [CLEAR](#) production systems! We will also have the latest about our innovative [SMARTWEB](#)® and [WF](#) sputter system designed for Touch Panel, Flexible Display and Electronic applications as well as Window Films.
